The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DIR/GTB/CHR7 or send an E-mail to egreen@nhgri.nih.gov
                                                                                                                                                                                                                                                                                                                                                            This clone is from the first release of the human BAC library. The library contains cloned DNA from a human male fibroblast cell line 9788K. For references see: Shizuya et al., Proc. Natl. Acad. Sci. 89:8794-8797 (1992); Kim et al., Genomics 34:213-218 (1996).
all regions were double stranded or sequenced with an alternate chemistry; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NEICHBORING SEQUENCE INFORMATION:
Actual start of this clone is at base position 1 of H_RG016J04;

Patent No. 6248562
GENERAL INFORMATION:
APPLICANT: Dunn, John J.
APPLICANT: Luft, Benjamin J.
TITLE OF INVENTION: No. 6248562el Chimeric Proteins Comprising
TITLE OF INVENTION: Borrella Polypeptides and Uses Therefor
NUMBER OF SEQUENCES: 144
CORRESPONDENCE ADDRESS:
ADDRESSEE: Brookhaven National Laboratory
                                                                                                                                                                                                                                                        APPLICANT: Mitcham, Jennifer L.
APPLICANT: Harlocker, Susan Louise
APPLICANT: Jiang Yuqui
APPLICANT: Steven G.

APPLICANT: Ralos, Mitcheel
APPLICANT: Ralos, Mitcheel
APPLICANT: Ralos, Cary
APPLICANT: Retter, Mark
APPLICANT: Bolk, John
APPLICANT: Day, Craig
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THERAPY AND
TITLE OF INVENTION: OMPOSITIONS OF PROSTATE CANCER
FILE REPERBENCE: 210121 427C9
CURRENT APPLICATION NUMBER: US/09/439,313
CURRENT FILING DATE: 1999-11-12
NUMBER OF SEQ ID NOS: 575
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 214
LENGTH: 444
TYPE: DNA
ORGANISM: HOMO Sapien
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8.6%; Score 48; DB 4; Length 444;

          The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; Six-Transmembrane Protein of Prostate 1; STMP1; prostate cancer; benign prostatic hyperstalia; acticular cancer; cryptorchidism; testicular disorder; proliferative disorder; lymphoma; leukaemia; melanoma; ovarian cancer; breast cancer; pancreatic cancer;

The invention relates to substantially pure prostate-specific or testis-specific polypeptides and the nucleic acids encoding them.

Also included are vectors and host cells expressing the proteins, a transgenic animal expressing the protein, antibodies against the proteins, probes for detecting the nucleic acids, antisense molecules for the nucleic acids and methods of isolating modulators of the proteins. Compounds that modulate the prostate specific or testis specific polypeptide are useful to diagnose, prevent or treat disorders of the testis or prostate particularly prostate cancer, benign of the testis or prostate prostatilis, testicular cancer, cryptorchidism, undescended, retractile, ascending or vanished testis. Other proliferative disorders for which the modulators may be used include lymphoma, leukaemia, melanoma, ovarian cancer, preast cancer, pancreatic cancer, liver cancer and lung cancer. The present sequence represents exon 4 of a prostate specific protein, Six-Transmembrane Protein of Prostate 1, STMP1.

The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                       Probe #5437 for gene expression analysis in human cervical cell sample.

                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                      human

They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of

measuring human gene expression in a sample derived from human heart. The present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, endicying and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Single exon nucleic acid probes for analyzing gene expression in human
                                                                                    Probe #5375 for gene expression analysis in human heart cell sample
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cctttgtcagagatgtgattcatccatatgctagaaaccaacagagtgacttttacaaaa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ttcctatagagattgtgaataaaaaccttacctatagttgccattactttgctctccctag

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ω
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from NIPO at ftp.wipo.int/pub/published_pct_sequences.

protein PGAMP-1. Nucleotides encoding pGAMP-1 were initially identified in a prostate cDNA library, this sequence representing a consensus. Human prostate growth associated membrane proteins PGAMP-1 and PGAMP-2 where in proteins pGAMP-1 and pGAMP-2 where are also to raise specific antibodies and to screen for specific modulators (agonists, antagonists or other potential cherapeutic agents). Antagonists of PGAMP are used to treaf or prevent a wide range of cancers (solid tumours, leukaemia, lymphoma etc.) and reproductive disorders (such as infertility, endometriosis, polycystic ovarian syndrome, prostatitis). PGAMP-encoding nucleic acids, its fragments and complements, may be used for recombinant production of pGAMP proteins, in gene therapy (e.g., as antisense molecules, triplexforming molecules and ribozymes), and as diagnostic probes and primers.

Comming molecules and ribozymes), and as diagnostic probes and primers.

Anti-PGAMP antibodies may be used for diagnostic probes and primers.

Comming molecules and ribozymes), and as diagnostic probes and primers.

Anti-PGAMP antibodies may be used for diagnostic probes and primers antagonists (including targetted delivery of other drugs), and in

                                                                                                                                                                         testis-specific polypeptides and the nucleic acids encoding them.
Also included are vectors and host cells expressing the proteins, a transgenic animal expressing the protein, antibodies against the proteins, probes for detecting the nucleic acids, antisense molecules for the nucleic acids and methods of isolating modulators of the proteins. Compounds that modulate the prostate specific or testis specific polypeptide are useful to diagnose, prevent or treat disorders of the testis or prostate particularly prostate cancer, benign of the testis or prostate particularly prostate cancer, benign or prostatic hyperplasia, acute prostatitis, testicular cancer, cryptorchidism, undescended, retractile, ascending or vanished testis. Other proliferative disorders for which the modulators may be used include lymphoma, leukaemia, melanoma, ovarian cancer, there are represents the cancer, liver cancer, liver cancer and lung cancer. The present sequence represents the open reading frame of a prostate specific protein, Six-Transmembrane Protein of Prostate 1, STMP1.

testis-specific polypeptides and the nucleic acids encoding them. Also included are vectors and host cells expressing the proteins, a transgenic animal expressing the protein, antibodies against the proteins, probes for detecting the nucleic acids, antisense molecules for the nucleic acids and methods of isolating modulators of the proteins. Compounds that modulate the prostate specific or testis specific polypeptide are useful to diagnose, prevent or treat disorders of the testis or prostate particularly prostate cancer, benign prostatic hyperplasia, acute prostatiis, testicular cancer, ryptorchidism, undescended, retractile, ascending or vanished
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             testis. Other proliferative disorders for which the modulators may be used include lymphoma, leukaemia, melanoma, ovarian cancer, breast cancer, pancreatic cancer, liver cancer and lung cancer. The present sequence encodes a prostate specific protein, Six-Transmembrane

The present sequence is human six transmembrane epithelial antigen of the prostate (STEAP)-2 clone GTD3 CDNA. STEAP is a member of cell surface serpentine transmembrane antigens. STEAP-2 gene is located on chromosome 7q21 and is used in gene therapy. Inhibiting the development or progression of a cancer (eg. prostate, colon, bladder, lung, ovarian and parcreatic) expressing STEAP or inhibiting growth or killing cells expressed STEAP, or inhibiting growth or killing cells composition to the patient. Treating a patient with a cancer that composition to the patient. Treating a patient with a cancer that composition to the patient a vector encoding single chain monoclonal antibody that comprises the variable domains of the heavy and light chains of the monoclonal antibody that specifically binds to STEAP, course that the vector delivers the single chain monoclonal antibody is expressed intracellularly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                         New STEAP (six transmembrane epithelial antigen of the prostate) proteins, expressed in human cancers, useful for detecting and treating
                                                                                                  Ξ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1162

This sequence represents a partial CDNA encoding a novel human protein, STRAP-2 (serpentine transmembrane antigen of the prostate). STRAP-2 is chighly bemologous to STRAP-1 (AAYSB194), particularly throughout the predicted transmembrane domains, but is encoded by a distinct gene, predicted transmembrane domains. but which show no significant structural conservation, but which show no significant structural conservation. but which show no significant structural conservation. But share 1 is characterised by six trateginal not structural structural manages to stransmembrane domains and intracellular and two intracellular loops. STRAP-2 exhibits a markedly different mRNA and two STRAP family members are differentially requilated. STRAP-1 expression is downregulated in some prostate cancers, whereas STRAP-1 expression is downregulated in some prostate cancers, strapper concerns and proteins is not capped and special stransmembrane concerns and proteins from the presence of six transmembrane concerns and proteins from the presence of six transmembrane concerns and pumporal immuno responses against stransmembrane specific antibodies. The antipodies may be used for detection; prognosis, and monitoring of cancers (or susceptibility to cancer), as therapeutic contains and protein proteins and be seed to their site of action. STRAP concerns and monitoring of cancers (or susceptibility special protein proteins and because anticaned proteins and proteins and because of the structure of action. STRAP concerns and monitoring of cancers (or susceptibility approtein proteins and because the protein proteins and proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diagnostic and prognostic reagents, for identifying STRAP-expressing cells for screening inhibitors of STRAP expression and for therapeutic modulation/inhibition of STRAP expression. Since high levels of STRAP proteins are exposed on the cell surface, they are easily targetted by systemically administered agents, and because they are expressed mainly on prostatic epithelial cells, agents targetted to them should have minimal side effects on other tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             gacttttacaaaattcctatagagattgtgaataaaaccttacctatagttgccattäct 126

```
testis-specific polypeptides and the nucleic acids encoding them.
Also included are vectors and host cells expressing the proteins, a transgenic animal expressing the proteins, antibodies against the proteins, probes for detecting the nucleic acids, antisense molecules for the nucleic acids and methods of isolating modulators of the proteins. Compounds that modulate the prostate specific or testis specific polypeptide are useful to diagnose, prevent or treat disorders of the testis or prostate particularly prostate cancer, benign of the testis or prostate particularly prostate cancer, benign cryptorchidism, undescended, retractile, ascending or vanished testis. Other proliferative disorders for which the modulators may be used include lymphoma, leukaemia, melanoma, ovarian cancer, breast cancer, pancrealic cancer, liver cancer and lung cancer. The present sequence encodes prostate specific protein, Six-Transmembrane protein of Prostate 1, STMPI, ORF2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                          New polynucleotide for the diagnosis, prevention and treatment for prostate and testis disorders, particularly prostate cancer, comprises prostate-specific or testis-specific nucleic acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       319

The invention relates to substantially pure prostate-specific or testis-specific polypeptides and the nucleic acids encoding them. Also included are vectors and host cells expressing the proteins, a transgenic animal expressing the protein, antibodies against the proteins, probes for detecting the nucleic acids, antisense molecules for the nucleic acids and methods of isolating modulators of the proteins. Compounds that modulate the prostate specific or testis specific polypeptide are useful to diagnose, prevent or treat disorders of the testis or prostate particularly prostate cancer, benign or prostatic hyperplasia, acute prostatitis, testicular cancer, cryptorchidism, undescended, retractile, ascending or vanished testis. Other proliferative disorders for which the modulators may be testis. Other proliferative disorders for which the modulators may be cancer include lymphona, leukaemia, melanoma, voarian cancer, breast cancer, pancreatic cancer, liver cancer and lung cancer. The present sequence represents the second open reading frame of a prostate
                                                                                                                  Human; Six-Transmembrane Protein of Prostate 1; STMP1; prostate cancer; benign prostatic hyperplasia; acute prostatitis; testicular cancer; cryptorchidism; testicular disorder; proliferative disorder; lumphoma; leukaemia; melanoma; ovarian cancer; breast cancer; pancreatic cancer; liver cancer; lung cancer; cytostatic; ss; ORF2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    sequence represents the second open reading frame of a prostate protein. Six-Transmembrane Protein of Prostate 1, STMP1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New polynucleotide for the diagnosis, prevention and treatment for prostate and testis disorders, particularly prostate cancer, comprises prostate-specific or testis-specific nucleic acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Six-Transmembrane Protein of Prostate 1,

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         * NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2438: contig of 2438 bp in length 2538: gap of unknown length 8133: contig of 5595 bp in length
